<p>Make a mock-up of your project out of cardboard, clay or Lego depending on what you have available.</p>	<p>Work without using digital resources — draw your concept on a piece of paper.</p> <p>Share this work - does your audience understand the idea?</p>
<p>Spend the next half an hour playing with the materials available in your studio space.</p> <p>Draw inspiration from what’s there to develop your project in a new way.</p>	<p>How will an audience interact with your product or service?</p> <p>Sketch the answer.</p>
<p>Can you create new ideas for your project using old materials?</p>	<p>Test your ideas through creating them physically. Use this to help you decide which direction to take.</p>
<p>Look at the project you are working on, consider what materials you have used. How do they impact the environment? What could you reduce?</p>	<p>How could your project engage with the issue of climate change?</p>

<p>Impose a particular way of working by creating a framework for your project. Decide this as a team.</p>	<p>What could you change about your project to make it more sustainable?</p>
<p>Make a commitment to design or create something that you feel strongly about.</p>	<p>Can your project facilitate change in some way?</p>
<p>Give yourself some creative constraints around the words reuse / repurpose / recycle as part of your project.</p> <p>Show your audience how.</p>	<p>Use your agency as a designer to create an outcome that might steer people in the right direction.</p>
<p>Think about how your project could have more than one purpose.</p>	<p>How can you reuse or repurpose what you have made?</p>

Thank you for participating.

<p>Consider your use of materials. How could they be more sustainable? What would be the most credible version of your project?</p> <p>A sustainable activity is able to continue without running out of resources or causing harm.</p>	<p>How can your creative outcome be circular?</p> <p>The circular economy is a system where materials never become waste and nature is regenerated. In a circular economy, products and materials are kept in circulation through processes like maintenance, reuse, refurbishment, remanufacture, recycling & composting.</p>
<p>Think creatively about how you can encourage your audience to behave differently or learn something new through your project outcome.</p>	<p>How could your project have an impact on a community issue connected to sustainability?</p>
<p>How can your project connect an audience with an issue of climate, social or racial crises?</p>	<p>Consider what is the positive impact of your creative output?</p>
<p>Where is the activism in your work?</p> <p>Activism: the policy or action of using vigorous campaigning to bring about political or social change.</p>	<p>Instructions Choose one card from the pack by random or select from the themes of think, make, use or connect.</p> <p>Read the instruction and apply the activity to the project you are currently working on.</p> <p>Share your outcome with your group.</p>
